Flexgen Construction Technology

Re: AI Engineer: Computer Vision, LLMs & ML

Dear Flexgen Construction Technology Hiring Team,

I am excited to apply for the AI Engineer: Computer Vision, LLMs & ML role at Flexgen Construction Technology, a company that is revolutionizing the construction industry with its domain-aware AI tools, and I am particularly drawn to this position because of the opportunity to build RAG systems that understand construction terminology and domain-specific language.

With my experience in building and deploying ML systems across healthcare and retail/e-commerce, I believe I can leverage my strong Python skills and PyTorch expertise to tackle problems with no off-the-shelf answers on construction job sites. My work on the Patient Readmission Risk Predictor project has shown me the value of using SHAP values to produce clinician-facing explanations for each risk score, which aligns with the company's goal of making construction sites safer and more efficient.

I am also excited about the opportunity to deploy computer vision that detects safety violations from real-world job-site photos taken in poor lighting conditions. My experience with the Construction Site Safety Vision Monitor project has given me hands-on experience with YOLO object detection, which I believe can be adapted to this role. Furthermore, my work on the Customer Support RAG Chatbot project has shown me the potential of retrieval-augmented generation for improving customer support efficiency, a skill that could be valuable in this position.

Relevant skills: Python, PyTorch, TensorFlow, RAG, embeddings, LangChain, vector databases, computer vision (YOLO, Segment Anything)

I am excited about the opportunity to contribute my skills and experience to Flexgen Construction Technology and help tackle problems in the construction industry. Thank you for considering my application.

Sincerely,
Jordan Ellis
