Target Corporation

Re: Sr Applied Data Scientist - Search and Browse (Applied ML, NLP, LLMs)

Dear Target Corporation Hiring Team,

I am writing to apply for the Sr Applied Data Scientist - Search and Browse (Applied ML, NLP, LLMs) position at Target Corporation. Target Corporation is a major American retail chain operating both physical stores and a large e-commerce platform, investing heavily in AI-driven search and personalization. That is the kind of problem I want to work on next.

Data Scientist / Machine Learning Engineer with 4 years of experience building and deploying ML systems across healthcare and retail/e-commerce, spanning predictive risk modeling, recommendation systems, and retrieval-augmented generation. Strong Python and SQL foundation with hands-on production experience in PyTorch, AWS SageMaker, and Databricks. Targets Data Scientist, Machine Learning Engineer, and Applied Scientist roles. My "Patient Readmission Risk Predictor" project (Python, XGBoost, scikit-learn, SQL, SHAP, Pandas; Healthcare) is the closest match to this role's day-to-day work. The requirements I can evidence directly from my resume and portfolio are Embeddings, GenAI/RAG systems, retrieval and ranking models, NLP.

Relevant skills: Embeddings, GenAI/RAG systems, retrieval and ranking models, NLP

I would welcome the chance to discuss how my background fits the Sr Applied Data Scientist - Search and Browse (Applied ML, NLP, LLMs) role at Target Corporation. Thank you for your time and consideration.

Sincerely,
Jordan Ellis
